

SHAYNE FOX HARDWARE. GEO SERIES INFO AND SPECIFICATION SHEET.

THE STORY

SFH aims to provide unique cast bronze hardware for all interior applications. The products we make are simple, solid, clean lined and feature soft tumbled surfaces. The subtle earthiness of the bronzes we use combined with the shapes, make our hardware well suited for transitional or modern spaces.

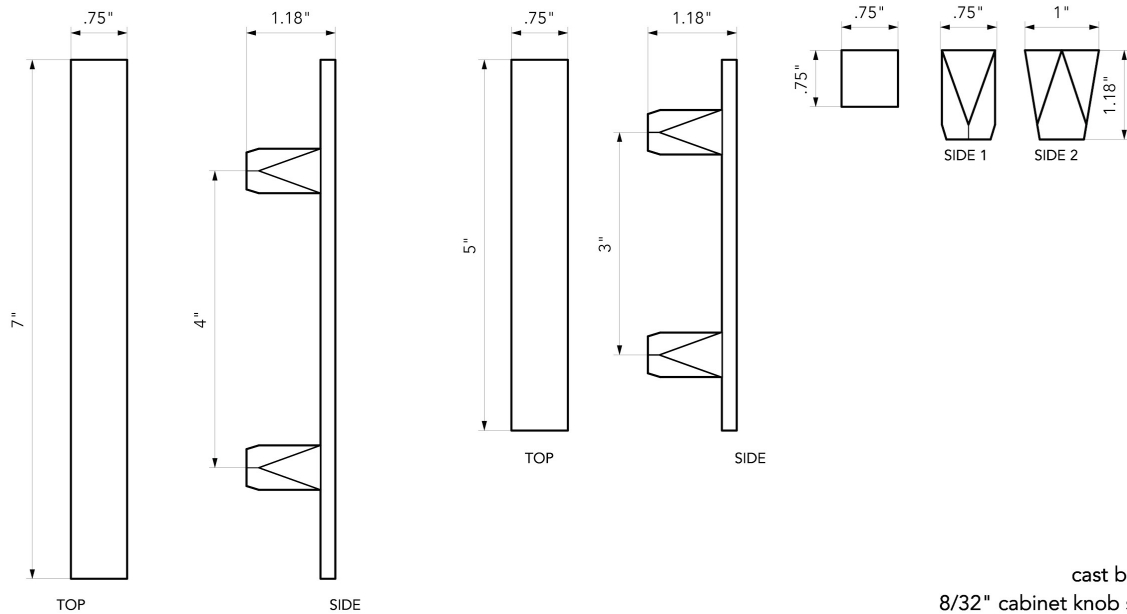

Our debut GEO series is our take on the every day handle and knob with a nod to all things rustic, organic and a wee bit art deco. While we strive for consistency in form, we welcome the inherent and subtle differences that each cast bronze piece showcases.

Originally designed with state of the art technology, our hardware is made the old fashioned way from bronze that is hand poured when molten, and then hand finished once cooled. This process makes each piece unique. And like the name that our debut GEO series denotes, we see each piece as a little gem.

THE SPECS

KNOBS, 5" HANDLE, 7" HANDLE

GEO SERIES

cast bronze
8/32" cabinet knob screw

THE GEO SERIES SHAPES

Currently we are offering six pieces in the series, one knob size, one 5" handle and one 7" handle, one 12" handle, one 2.5" hook and one 3.5" bin pull. Specification drawings are being worked on for the bin pull, the 12" handle and the hook.

THE BRONZE

Currently we are offering two tones of bronze for all our shapes. Our manganese bronze has an appearance like brass and is more golden, while our silica bronze has a deeper, warmer, more traditional bronze tone. The above pic shows the silica bronze on the left and the manganese bronze on the right. We do also offer 'blackened' versions of our wares in all blackened, and an edge reveal blackened.
